ORIGINAL
(Red)

On May 13, 1977, we took samples at the Llangollen Landfill to check high chloroform levels from the Artesian Water Company. We were prepared to take samples from Artesian Wells #2, #7, and finished water. Well G-3 was added by Philadelphia. Samples were aqueous and Pentane Extract, however, we had only prepared 3 pentane bottles for Well #2, #7, and finished.

Analysis was by direct aqueous injection and Pentane Extract on E.C. allowing detection limits of 10ppb and 1ppb respectively. Chloroform detected did not exceed that in the blanks.
